

TIXR

Tixr Global Expansion | Case Prompt

The Situation

Tixr is a premium platform for selling tickets to live events, working with top-tier partners across music, sports, comedy, immersive experiences, and attractions. The company is expanding globally. With teams already in London and Canada, Tixr is now moving into EMEA, South America, and Southeast Asia.

The goal is a consistent foundation that lets each market feel local. That means building a repeatable way of working that holds up across:

- time zones + languages
- local payment and payout methods, plus fraud and chargebacks
- regulatory and data privacy requirements
- partner onboarding and launch readiness
- support surges during on-sales and event weekends

Like most fast-growing companies, Tixr is doing this with strong but scattered tools (CRM, support, and knowledge systems), imperfect data, and limited bandwidth

The Question

Tixr wants a concrete answer to:

🔦 *How do we optimize the organization for the global stage, which markets should we consider, and how do we ship a working system that tracks live market and venue data and identifies targets we can realistically win?*

Your Assignment

You will build and present a working prototype plus an executive-ready recommendation. The prototype must directly support global expansion decision-making and execution.

[Part A] Global Venue Intelligence System

Build something a sales rep could use: a live, prioritized list of venues Tixr can realistically win in one market you choose.

What it needs to do

1. **Venue discovery:** Pull venues from sources you choose (public datasets, scraping, APIs, manual research, or a mix). Deliver a clean, normalized table with: name, location, type, capacity, and website. Be ready to explain why you trusted these sources.
2. **Live enrichment:** The dataset should be refreshable on demand. Add at least two enrichment signals per venue, such as: upcoming events cadence, ticketing vendor signals, operator or owner signals, and genre or programming profile.
3. **Exclusivity scoring:** Create a model that estimates the likelihood a venue is not locked into Live Nation exclusivity. Include a confidence level and a plain-English explanation of the evidence behind each score. Use whatever approach you think is defensible and be ready to explain what you did + did not include.
4. **Target prioritization:** Output a ranked target list with filters a rep would actually use: exclusivity likelihood, venue type, capacity range, activity level, and a premium-fit score.
5. **Decision log:** Keep a short, running log of what you chose and why. This is weighted equally with the system itself.

How it will be evaluated

The prototype will be reviewed live. You will walk through it as if handing it to a sales team: Expect questions on data credibility, model defensibility, and what you would build next.

[Part B] Global Market Recommendation

Using your system plus research, recommend:

- Top 3 markets to pursue over 12–24 months
- Sequence (1st, 2nd, 3rd) and rationale
- Key risks/constraints per market (payments, regulatory, support coverage, competition)

[Part C] Global-Ready Org + Operating Model

Propose a concrete operating model to execute global expansion.

Must include:

- The top capabilities Tixr must build to operate globally (product + ops)
- A RACI (who owns what across Eng/CS/Ops/Data)
- A cadence (weekly/monthly reviews, dashboards, feedback loops)

Scoring Criteria

Criteria	Evaluation	Weight
Prototype usefulness	Does it actually help us identify and track venues and prioritize targets?	35%
Market + entertainment realism	Does the market thesis reflect how venues, promoters, and ticketing work?	25%
Data credibility + inference quality	Are signals explainable, sourced, refreshed, and evaluated?	20%
Operating model maturity	Clear ownership, cadence, and a plan that would work in a real org.	10%
Communication	CEO-ready narrative that is crisp, structured, and decision-oriented.	10%

Deliverables

1. **Prototype + Demo Video** (*5–8 minutes*)
 - Venue discovery → enrichment → exclusivity scoring → prioritization
 - Evaluation results (even if imperfect)
 - Include a brief, 'how it works'
2. **Executive Memo** (*max 2 pages*)
 - Recommended markets + sequence (top 3)
 - What your data suggests about venues in the first market
 - Key risks and what you would do next (30/60/90 day plan)
3. **Operating Model Slide** (*1 slide*)
 - Capability gaps + RACI + cadence + governance loop
